Projects

1. Userlist with JS (local userlist with array)

Info

This project is created with pure HTML, CSS and JS and this project helps to get users, add user, view user by id, edit user by id, delete user by id, search user by everything and filter user by city and by status. It's known as CRUD (Create / Read / Update / Delete) project.

Demo

https://userlist-with-js.vercel.app/

Code

https://github.com/olimyuldoshev2003/Userlist-with-JS

2. Hospital Tj

Info

This project is created with React JS and for showing the Hospitals, their categories, scedule and so on. With this project you can find your favorite Hospital, about that Hospital, its category and its services. This project is created with Russian language.

And also the database (the server side) is created with the programming language Python and database PostgreSQL.

If you wanna find the information about Hospitals, use this website.

Demo

https://hospital-tj.vercel.app/

Code

https://github.com/olimyuldoshev2003/hospital-tj

3. Post Office

Info

This project is created with the React JS and used the fake database of the post offices in the server side of this project. With this project you can find some Post Offices of the cities of India. For seeing the Post Offices you need to write the correct Zip Code. For finding the ZIP codes you need to open the website http: //www.postalpincode.in/ and open any office and after this you'll find the zip code of that city.

Demo

https://post-office.vercel.app/

Code

https://github.com/olimyuldoshev2003/Post_office

4. Simple website of the best singer, teacher and inventor of Tajikistan Kamil Nurmatov

Info

This project is created with React JS and for one of the best singer, techer and inventor of Tajikistan Kamil Nurmatov. With this website you can see everything about him (his fullname, his history, his songs and videos and his inventions).

Demo

https://kamilnurmatov.vercel.app/

Code

https://github.com/olimyuldoshev2003/my_first_project

5. Memory Game

Info

This game is created with pure HTML, CSS and JS and created for people, who loves playing games. This is the simple game and helps people to enjoy playing this game.

Demo

https://memory-game-fruits.vercel.app/

Code

https://github.com/olimyuldoshev2003/Memory-game

6. Formulas for volume of ice

Info

This project is created with the library React JS and also this project is created with Tajik language. This project is created for solving some mathematical formulas (the volume of ice), and the mathematical formulas are given. Only we need to add the number and click the submit button.

Demo

https://formula-ice.vercel.app/

Code

https://github.com/olimyuldoshev2003/Formulas-for-University

7. Website Countries

Info

This project is created with React TS and for showing the countries of the world. With this project you can find any country of the world, about that country, its capital, its population, its area and so on. This project is created with English language. And also the database (the server side) is used the free API of REST Countries.

Demo

https://website-countries.vercel.app/

Code

https://github.com/olimyuldoshev2003/website-countries
